

**Health Study Update (March 15)**  
**(reported by Horacio Tovalin)**

The following is the study conducted at T2:

1. VOCs personal monitoring was performed to 30 children from two schools.
2. Outdoor and indoor PM2.5, VOCs and ozone, ultrafine particles (concentration and number) monitoring was performed in 13 houses, 2 schools and at T2.
3. Physical examination, blood tests and olfactory threshold test were performed to 25 children and their parents.
4. Questionnaires about health conditions, diet, physical activity and activities were applied to 250 children from both schools.

The team will move from T2 to T1.
